

# Environmental Restoration Project

## Area of Concern (AOC) No. 1078: Building 6640 Septic System, TA-III

ADS: 1295

Operable Unit: Septic Tanks and Drainfields

Site History .....	1
Constituents of Concern.....	1
Current Hazards .....	1
Current Status of Work .....	1
Future Work Planned .....	2
Waste Volume Estimated/Generated .....	2

Primary Contact: [Dick Fate](#)

Office Phone: 284-2568

### Site History

Historical SNL/NM Facilities Engineering drawings indicate that this septic system consisted of a septic tank and a drainfield located approximately 60 and 70 feet north and west respectively of Building 6640, in TA-III. It is assumed that this septic system was abandoned in the early 1990s when the City of Albuquerque sanitary sewer system was extended into TA-III. No other historical research has been conducted for this site.

### Constituents of Concern

Constituents of concern for this site are unknown.

### Current Hazards

No known surface hazards have been identified. Environmental characterization has not been conducted at the site; therefore potential subsurface environmental hazards are unknown.

### Current Status of Work

Samples were collected from the septic tank in late 1990 or early 1991 for waste characterization purposes. No information has been found to indicate that residual septic tank contents (if any remain) have been removed.

A field inspection at the site was conducted in September 1999 and the system was not located. A backhoe was used at the site in March 2002 to physically locate the drainfield drainlines. To determine if environmental contamination is present beneath this system and in accordance with

agreements reached with NMED personnel, additional sampling was conducted at this site. As shown on the site map, three soil sample boring were drilled directly beneath drainfield drainlines in August 2002. Soil samples collected from these borings were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), total cyanide, high explosive (HE) compounds, metals, and radionuclides.

## **Future Work Planned**

This site may be selected for deeper environmental characterization sampling if analytical results from the shallow sampling indicate potentially significant contamination at depth.

## **Waste Volume Estimated/Generated**

No environmental characterization or remediation waste has been generated at the site to date.

**Information for ER Site 1078 was last updated Jan 17, 2003.**
